

ProThin® Weight Management System

Health Consequences

- Over 66% of U.S. adults over age 20 are overweight.
- More than one-third of U.S. adults—over 72 million people—were obese in 2005-2006
- Prevention of obesity is currently one of the top public health priorities

Health Consequences

Excess weight increases the risk of developing many health conditions including:

- High blood pressure
- Osteoarthritis
- High total cholesterol
- Type 2 diabetes
- Coronary heart disease
- Stroke

Lifestyle Trends

- Dietary Degeneration – Bad Eating Habits
- Inactive Lifestyle
- Stress
- Insufficient Sleep

Weight Management Therapy

- Reduce caloric intake
 - Portion control
 - Calorie control
- Increase energy expenditure
 - Thermogenic activities (activities that create heat and burn calories – brisk walking, biking, etc.)
- **Combination of diet, exercise, and supplements is most effective**
